Signs and symptoms of Autism Spectrum Disorder (ASD)

Autism Spectrum Disorder (ASD) is characterised by impairments in social communication, as well as restricted or repetitive patterns of behaviour, interests and activities. The diagnostic process is complex and takes into account the various environmental circumstances the individual engages in.

This checklist is NOT A STANDALONE DIAGNOSTIC TOOL.

Α	Social & Communication Deficits	
A1	Problems understanding and responding to emotions in social settings:	
	Unusual social interaction	
	Reduced sharing of feelings	
	Failure to initiate or respond to social interactions	
	Difficulties with non-verbal communication in social settings:	
	Unusual body language when communicating (for example, not using hands)	
A2	Unusual eye contact	
	Poor understanding other's gestures (for example, following the gaze of others)	
	Lack of facial expression/affect	
А3	Problems developing, maintaining and understanding relationships:	
	Difficulty adjusting behaviour in different social settings	
	Lack of interest in peers	
	Poor understanding of peers and social activities	
	Difficulty sharing	
	Poor imaginative play	
В	Restricted, Repetitive Patterns of Behaviour, Interests or Activities	
B1	Stereotyped/repetitive behaviours:	
	Lining things up/obsessive compulsive like tendences	
	 Lining things up/obsessive compulsive like tendences Repeating irrelevant words/phrases (for example, dialogue of favourite shows) 	
	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet 	
	Repeating irrelevant words/phrases (for example, dialogue of favourite shows)	
R2	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet 	
B2	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: 	
B2	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes 	
B2	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) 	
B2	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste 	
	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste Highly restricted, fixated interests that are unusually intense Extreme obsessions with unusual objects/topics Discussions always return to fixated topics 	
	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste Highly restricted, fixated interests that are unusually intense Extreme obsessions with unusual objects/topics 	
	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste Highly restricted, fixated interests that are unusually intense Extreme obsessions with unusual objects/topics Discussions always return to fixated topics 	
	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste Highly restricted, fixated interests that are unusually intense Extreme obsessions with unusual objects/topics Discussions always return to fixated topics Unusually sensitive or insensitive to sensory input Indifference to pain/temperature Adverse response to sounds/textures 	
В3	 Repeating irrelevant words/phrases (for example, dialogue of favourite shows) Repetitive actions such as tapping fingers/feet Inflexible demands for sameness in one's environment/routines: Extreme distress at small changes Rigid thought patterns (for example, can appear argumentative) Food needs to be the same in texture/colour/taste Highly restricted, fixated interests that are unusually intense Extreme obsessions with unusual objects/topics Discussions always return to fixated topics Unusually sensitive or insensitive to sensory input Indifference to pain/temperature 	

If a child has experienced at least 1 symptom from **each of the A categories** and at least 1 symptom from two **B categories** during their early developmental period and beyond, they may meet criteria for an ASD diagnosis.
